

Panduan Instalasi Python dan Django

KELOMPOK 4

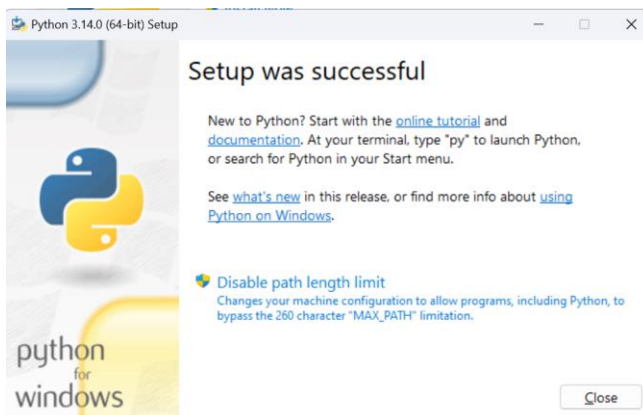

A. Instalasi Python

1. Unduh software Python versi 3.14.0 (atau versi terbaru) dari situs resmi: <https://www.python.org/downloads/>. Pastikan komputer terkoneksi internet saat instalasi.
2. Klik dua kali file python-3.14.0amd64.exe. Centang “Add Python 3.14.0 to PATH” dan klik “Install Now”.

[Gambar 1.1: File python-3.14.0]

3. Klik tombol “Close” untuk menutup jendela instalasi.

[Gambar 1.2: Informasi Instalasi Sukses]

B. Memeriksa Instalasi Python

1. Buka Command Prompt (CMD).

2. Ketik perintah: `python --version` untuk melihat versi Python.

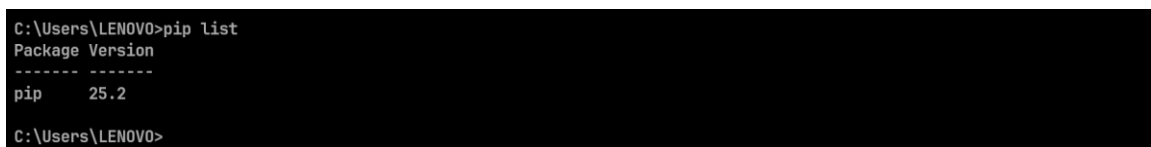

```
Microsoft Windows [Version 10.0.22631.5909]
(c) Microsoft Corporation. All rights reserved.

C:\Users\LENOVO>python --version
Python 3.14.0

C:\Users\LENOVO>
```

[Gambar 1.3: Melihat Versi Python]

3. Ketik `pip list` untuk melihat daftar paket yang sudah terinstal.

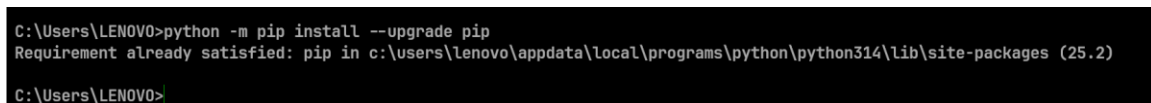

```
C:\Users\LENOVO>pip list
Package Version
-----
pip      25.2

C:\Users\LENOVO>
```

[Gambar 1.4: Melihat Paket yang Terinstal]

4. Jika muncul peringatan untuk memperbarui pip, ketik `python -m pip install --upgrade pip`.

```
C:\Users\LENOVO>python -m pip install --upgrade pip
Requirement already satisfied: pip in c:\users\lenovo\appdata\local\programs\python\python314\lib\site-packages (25.2)

C:\Users\LENOVO>
```

[Gambar 1.5: Meng-upgrade pip]

C. Membuat Virtual Environment (Lingkungan Virtual)

1. Buka CMD, lalu ketik `python -m venv env` untuk membuat folder virtual environment bernama “env”.

```
C:\Users\LENOVO>python -m venv env

C:\Users\LENOVO>
```

[Gambar 1.6: Membuat Lingkungan Virtual]

2. Aktifkan lingkungan virtual dengan mengetik `env\Scripts\activate.bat`.

```
C:\Users\LENOVO>env\Scripts\activate.bat
(env) C:\Users\LENOVO>
```

[Gambar 1.7: Mengaktifkan Lingkungan Virtual]

3. Setelah aktif, prompt akan berubah menjadi `(env) C:\Users\Administrator>`.

4. Perbarui pip dengan perintah `python -m pip install --upgrade pip`.

```
(env) C:\Users\LENOVO>python -m pip install --upgrade pip
Requirement already satisfied: pip in c:\users\lenovo\env\lib\site-packages (25.2)

(env) C:\Users\LENOVO>
```

[Gambar 1.8: Meng-upgrade pip di Lingkungan Virtual]

5. Periksa kembali paket di lingkungan virtual dengan mengetik `pip list`.

```
(env) C:\Users\LENOVO>pip list
Package Version
-----
pip      25.2

(env) C:\Users\LENOVO>
```

Activate Windows
Go to Settings to activate Windows.

[Gambar 1.9: Melihat Paket di Lingkungan Virtual]

D. Instalasi Django

1. Pastikan lingkungan virtual aktif.
2. Ketik perintah: `pip install django==5.2.7`.

```
(env) C:\Users\LENOVO>pip install django==5.2.7
Collecting django==5.2.7
  Downloading django-5.2.7-py3-none-any.whl.metadata (4.1 kB)
Collecting asgiref<=3.8.1 (from django==5.2.7)
  Downloading asgiref-3.10.0-py3-none-any.whl.metadata (9.3 kB)
Collecting sqlparse<=0.3.1 (from django==5.2.7)
  Downloading sqlparse-0.5.3-py3-none-any.whl.metadata (3.9 kB)
Collecting tzdata (from django==5.2.7)
  Downloading tzdata-2025.2-py2.py3-none-any.whl.metadata (1.4 kB)
Downloading django-5.2.7-py3-none-any.whl (8.3 MB)
 8.3/8.3 MB 2.5 MB/s 0:00:03
Downloading asgiref-3.10.0-py3-none-any.whl (24 kB)
Downloading sqlparse-0.5.3-py3-none-any.whl (44 kB)
Downloading tzdata-2025.2-py2.py3-none-any.whl (347 kB)
Installing collected packages: tzdata, sqlparse, asgiref, django
Successfully installed asgiref-3.10.0 django-5.2.7 sqlparse-0.5.3 tzdata-2025.2

(env) C:\Users\LENOVO>
```

Activate Windows
Go to Settings to activate Windows.

[Gambar 1.10: Instalasi Django]

3. Tunggu hingga proses instalasi selesai.

E. Membuat Proyek Django

1. Ketik `django-admin startproject project_sisfodik` untuk membuat proyek baru.

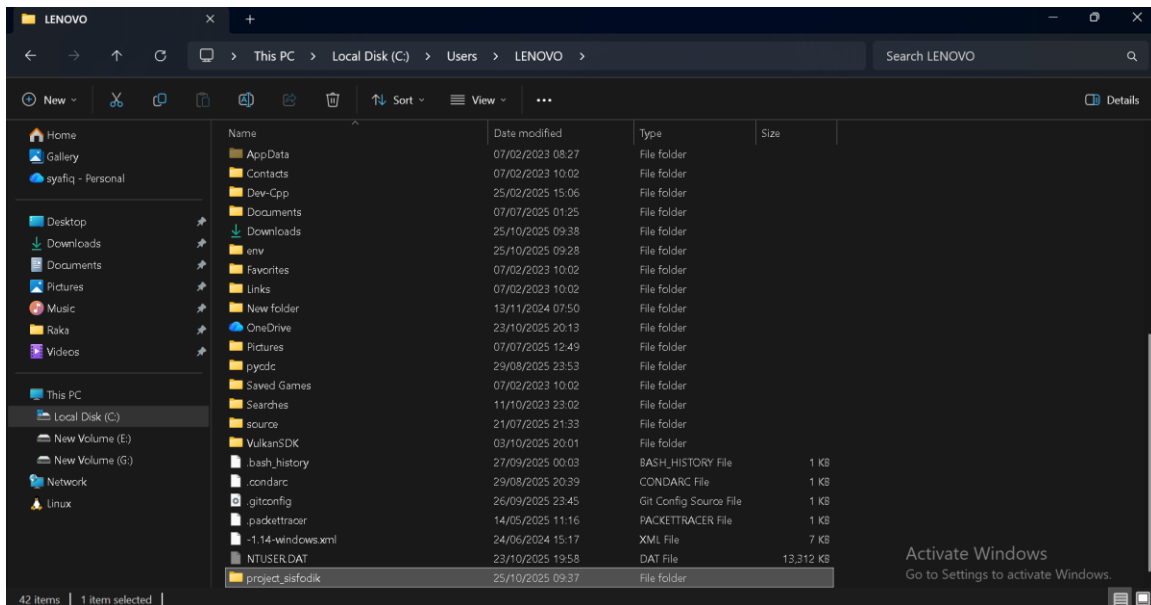

```
(env) C:\Users\LENOVO>django-admin startproject project_sisfodik

(env) C:\Users\LENOVO>
```

Activate Windows
Go to Settings to activate Windows.

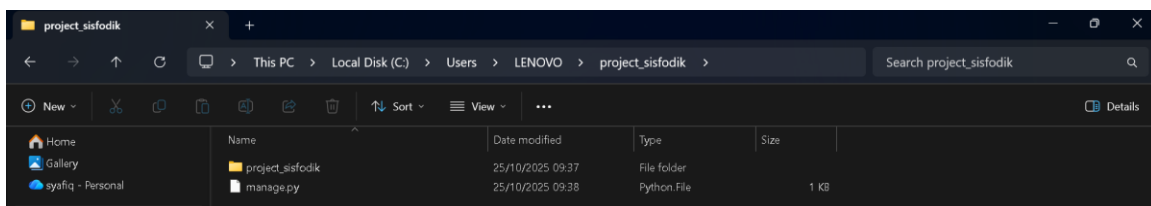

[Gambar 1.11: Membuat Proyek Django]

2. Pastikan folder `project_sisfodik` muncul di direktori pengguna.

[Gambar 1.12: Folder `project_sisfodik`]

3. Di dalamnya terdapat file `manage.py` dan folder `project_sisfodik`.

[Gambar 1.13: Struktur File Proyek]

F. Menjalankan Server Django

1. Masuk ke folder proyek dengan perintah `cd project_sisfodik`.

[Gambar 1.16: Menjalankan Server Django di CMD]

2. Jalankan server dengan perintah `python manage.py runserver`.

```
(env) C:\Users\LENOVO\project_sisfodik>python manage.py runserver
Watching for file changes with StatReloader
Performing system checks...

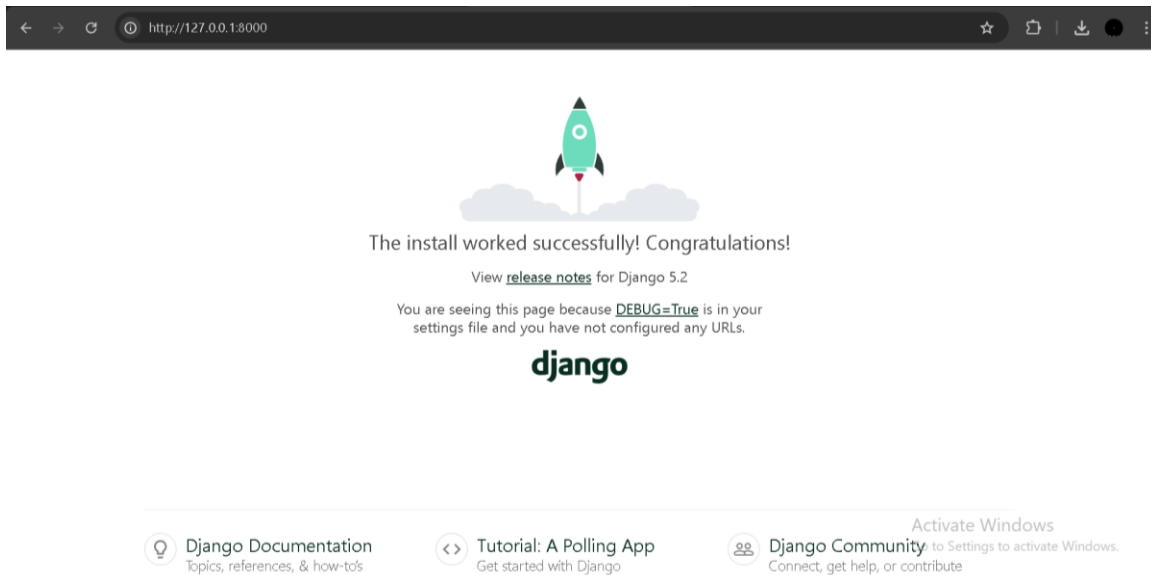

System check identified no issues (0 silenced).

You have 18 unapplied migration(s). Your project may not work properly until you apply the migrations for app(s): admin,
auth, contenttypes, sessions.
Run 'python manage.py migrate' to apply them.
October 25, 2025 - 09:42:41
Django version 5.2.7, using settings 'project_sisfodik.settings'
Starting development server at http://127.0.0.1:8000/
Quit the server with CTRL-BREAK.

WARNING: This is a development server. Do not use it in a production setting. Use a production WSGI or ASGI server inste
ad.
For more information on production servers see: https://docs.djangoproject.com/en/5.2/howto/deployment/
Activate Windows
Go to Settings to activate Windows.
```

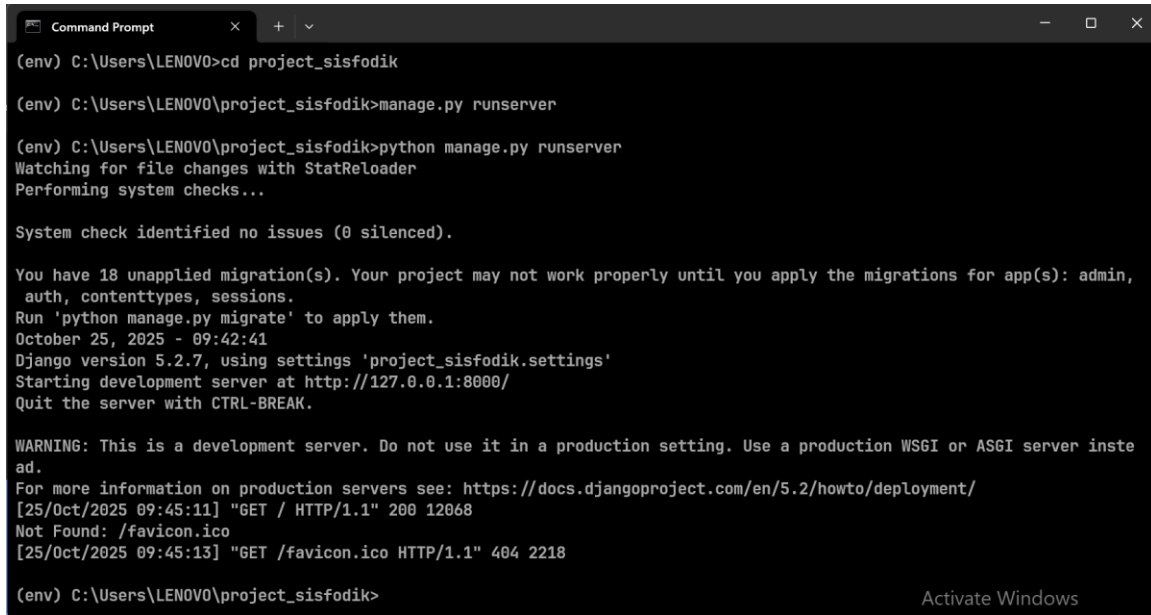

[Gambar 1.17: Menjalankan Server Django di CMD]

3. Buka browser dan ketik `http://127.0.0.1:8000` atau <http://localhost:8000/>.

[Gambar 1.18: Menjalankan Server di Browser]

4. Untuk menghentikan server, tekan Ctrl + C di CMD.

```
(env) C:\Users\LENOVO>cd project_sisfodik

(env) C:\Users\LENOVO\project_sisfodik>manage.py runserver

(env) C:\Users\LENOVO\project_sisfodik>python manage.py runserver
Watching for file changes with StatReloader
Performing system checks...

System check identified no issues (0 silenced).

You have 18 unapplied migration(s). Your project may not work properly until you apply the migrations for app(s): admin,
auth, contenttypes, sessions.
Run 'python manage.py migrate' to apply them.
October 25, 2025 - 09:42:41
Django version 5.2.7, using settings 'project_sisfodik.settings'
Starting development server at http://127.0.0.1:8000/
Quit the server with CTRL-BREAK.

(env) C:\Users\LENOVO\project_sisfodik>
```

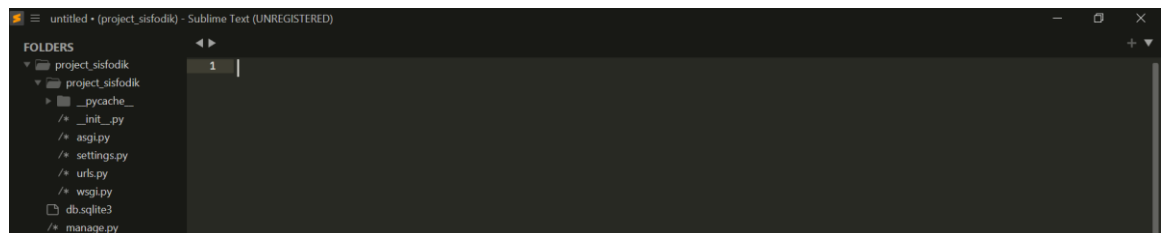

[Gambar 1.19: Mematikan Server Django]

Untuk Mengaktifkan kembali, jalankan kembali activate.bat

G. Konfigurasi Project Django

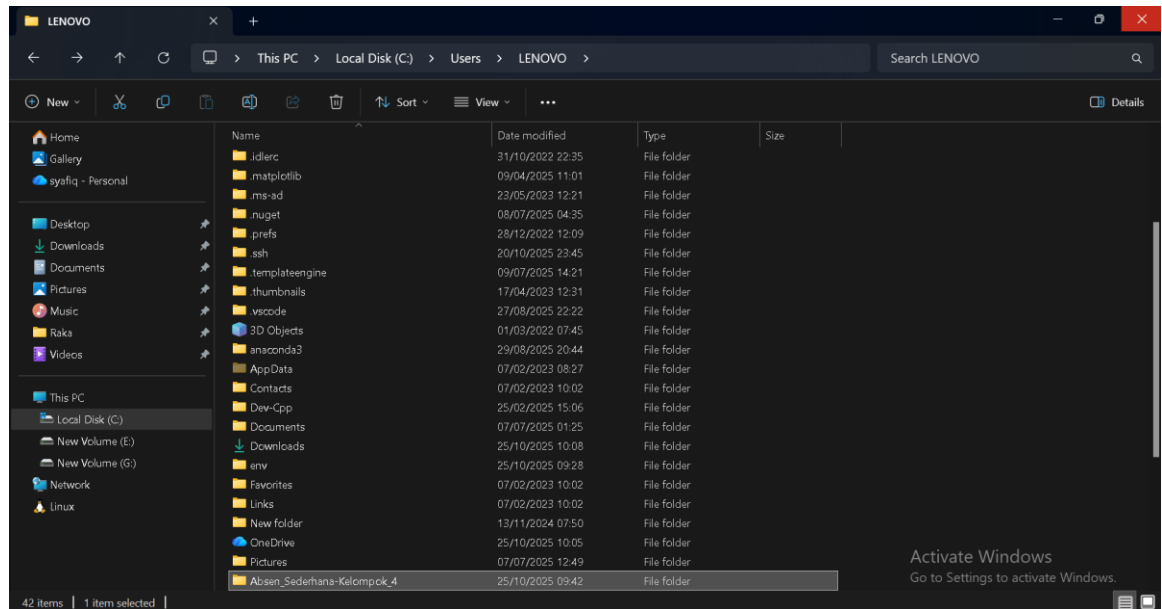

1. Membuka Project di Sublime Text

1. Buka project yang sudah dibuat bernama **project_sisfodik** di **Sublime Text**.

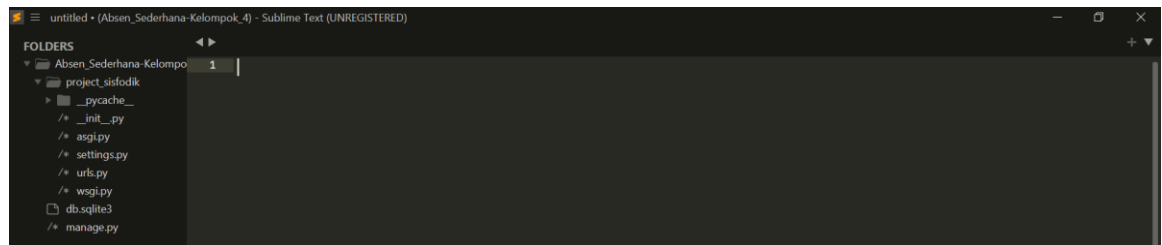

[Gambar 2.1: Struktur project *project_sisfodik*]

2. Ganti nama folder **project_sisfodik** menjadi nama lain sesuai keinginan, misalnya:
Absen_Sederhana-Kelompok_4.

[Gambar 2.2: Mengganti nama project]

3. Buka folder baru tersebut di Sublime Text.

[Gambar 2.3: Folder baru Absen_Sederhana-Kelompok_4]

H. Menjalankan Project Django

pastikan masih ada di virtual enviroment/ lingkungan virtual

1. Buka **Command Prompt** dan arahkan ke folder: `cd Absen_Sederhana-Kelompok_4`

2. Aktifkan **environment** dan jalankan server dengan mengetik: `python manage.py runserver` Lalu tekan **Enter**.

```
(env) c:\Users\LENOVO\Absen_Sederhana-Kelompok_4>python manage.py runserver
Watching for file changes with StatReloader
Performing system checks...

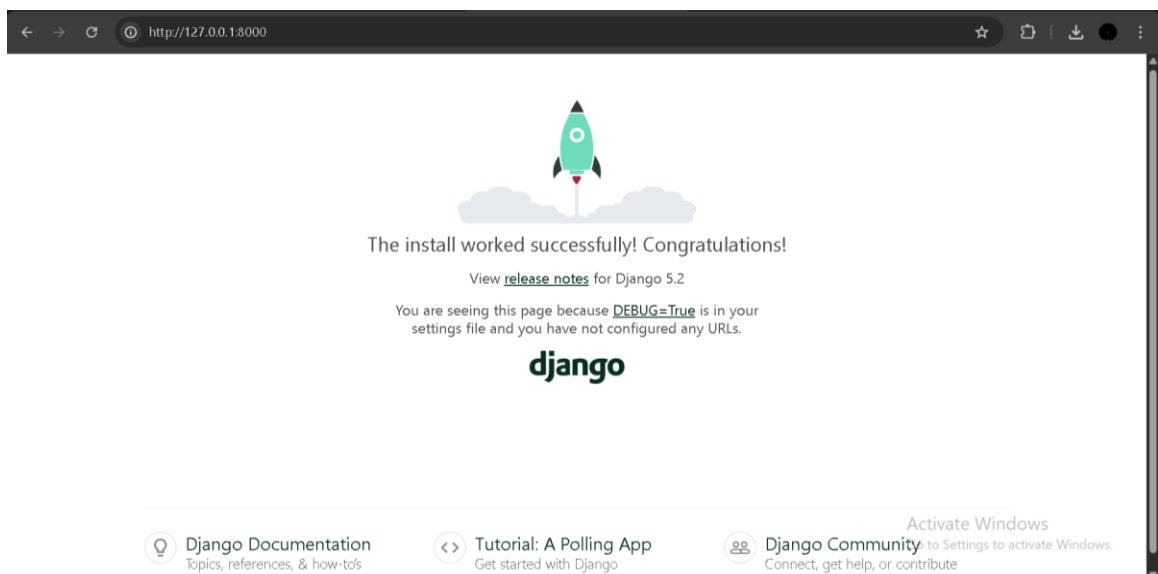

System check identified no issues (0 silenced).

You have 18 unapplied migration(s). Your project may not work properly until you apply the migrations for app(s): admin, auth, contenttypes, sessions.
Run 'python manage.py migrate' to apply them.
October 25, 2025 - 10:17:17
Django version 5.2.7, using settings 'project_sisfodik.settings'
Starting development server at http://127.0.0.1:8000/
Quit the server with CTRL-BREAK.

WARNING: This is a development server. Do not use it in a production setting. Use a production WSGI or ASGI server instead.
For more information on production servers see: https://docs.djangoproject.com/en/5.2/howto/deployment/
Activate Windows
Go to Settings to activate Windows.
```

[Gambar 2.4: Menjalankan server Django]

3. Jalankan project di browser dengan mengetik: <http://127.0.0.1:8000> atau <http://localhost:8000> Lalu tekan **Enter**.

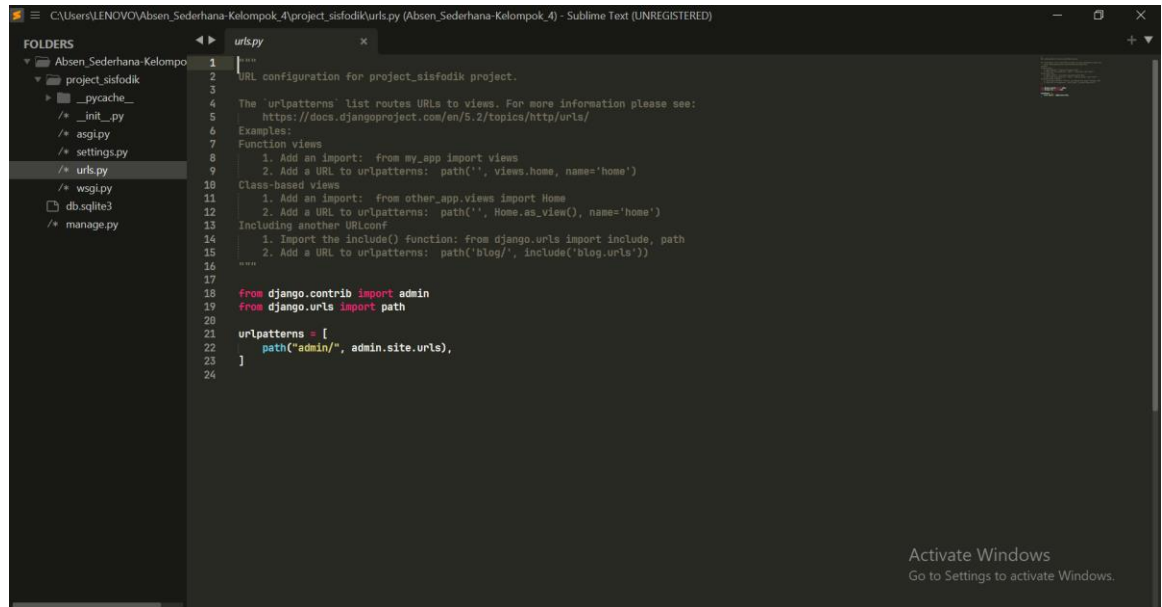

[Gambar 2.5: Menjalankan project di browser]

4. Mengganti nama folder project (misalnya dari *project_sisfodik* menjadi *Absen_Sederhana-Kelompok_4*) **tidak berpengaruh terhadap Django** selama struktur dan pengaturannya tetap sama.

I. Membuat Fungsi dan Memodifikasi URL

1. Buka folder **Absen_Sederhana-Kelompok_4** di direktori: C:\Users\Administrator menggunakan editor kode **Sublime Text**.
2. Klik dua kali file **urls.py** yang terdapat di dalam folder project.

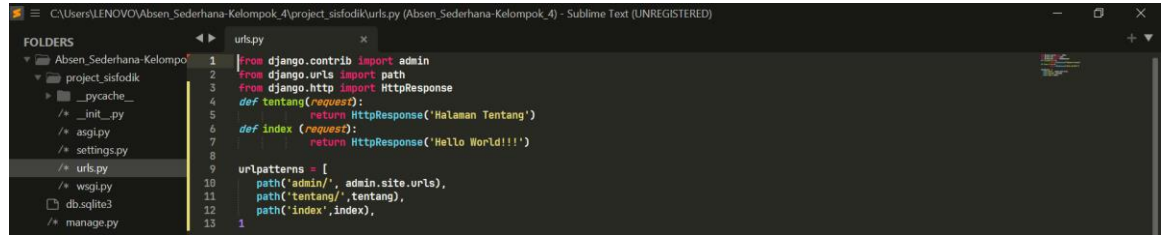

[Gambar 2.6: Isi file *urls.py*]

3. Modifikasi kode dalam **urls.py** menjadi seperti berikut:

1. from django.contrib import admin
2. from django.urls import path
3. from django.http import HttpResponse
- 4.
5. def tentang(request):
6. return HttpResponse('Halaman Tentang')
- 7.
8. def index(request):
9. return HttpResponse('Hello World!!!')
- 10.
11. urlpatterns = [
12. path('admin/', admin.site.urls),
13. path('tentang/', tentang),
14. path('index', index),
15.]

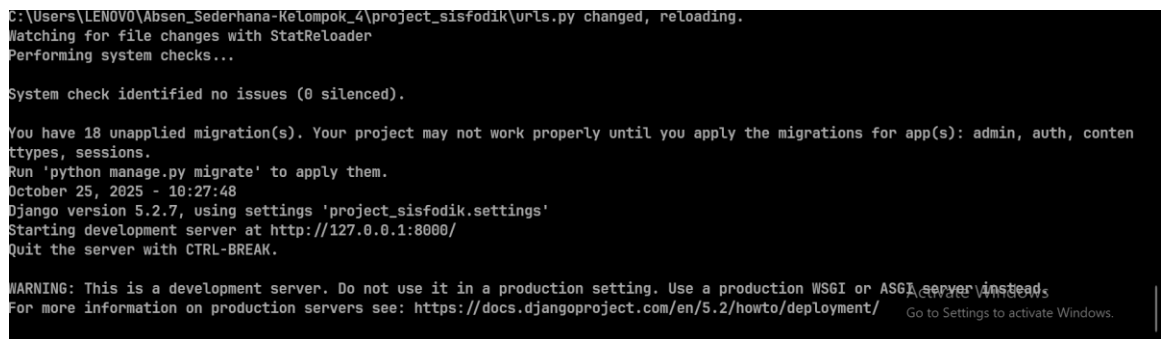

Setelah menulis kode di atas, tampilan di editor Sublime akan terlihat seperti:

[Gambar 2.7: Tampilan kode di Sublime Text]

J. Menjalankan Web Fungsi dan Memodifikasi URL

1. Jalankan kembali server Django seperti biasa dengan perintah: `python manage.py runserver`

[Gambar 2.8: Menjalankan server Django]

2. Buka browser (misalnya Mozilla Firefox), lalu ketik: <http://127.0.0.1:8000/index> atau <http://localhost:8000/index> Tekan **Enter**, maka akan tampil halaman:

[Gambar 2.9: Menjalankan halaman Index]

3. Untuk membuka halaman *tentang*, ketik: <http://127.0.0.1:8000/tentang> atau <http://localhost:8000/tentang> Tekan **Enter**, maka akan tampil halaman:

[Gambar 2.10: Menjalankan halaman Tentang]
